

Spare Seal Carriers

PRODUCT OVERVIEW

Tides Marine's Spare Seal Carriers were developed as a convenient device for storing spare lip seals on the propeller shaft between the SureSeal™ and the propeller shaft coupling. These carriers with spare lip seals can be installed along with each SureSeal™.

The SureSeal™ design allows the vessel operator to replace worn lip seals in the housing with these spare lip seals without uncoupling the shaft from the transmission. If necessary, the worn lip seals may be replaced in the water – no haul-out required.

The spare lip seal carrier is a lightweight, two-piece composite housing which is clamped over the spare lip seals and onto the propeller shaft between the SureSeal™ and the propeller shaft coupling. They are available in both imperial and metric sizes.

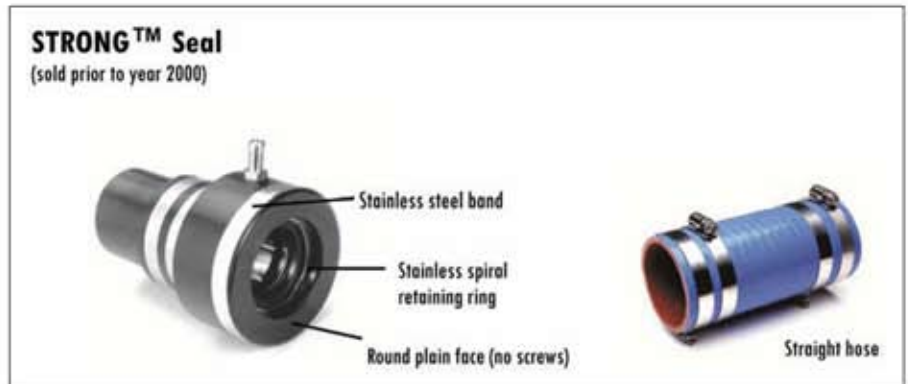

- Spare seal carrier part numbers for propeller shafts with diameters up to and including 1 3/4" contain one spare lip seal in a single housing.
- Spare seal carrier part numbers for propeller shafts with diameters from 2" up to and including 3" contain two (2) spare lip seals, each in their own housing.
- Spare seal carrier part numbers for propeller shaft diameters 3 1/4" and larger contain two spare lip seals in a single housing.

Spare Seal Carriers

BEFORE ORDERING

When ordering a spare seal carrier, you must first determine if you have a SureSeal™ or a STRONG™ Seal (last produced in 2000). Please note the insets at right.

The lip seals for some shaft sizes are NOT interchangeable.

Spare seal carriers for SureSeals™ are located on page 15. Spare seal carriers for STRONG™ Seal are located on page 16.

Identify your propeller shaft diameter in column A of each chart. Next, move to column B for this shaft diameter and confirm that there is at least this much clean, smooth space on the shaft to position the spare seal carrier(s).

Caution:

The spare seal carriers SHOULD NOT TOUCH THE SURESEAL™.
The spare seal carriers should be at least 1" from the SureSeal™ housing.
