

wavebrite™

Grey Water Filter System

A unique modular system, no more holding tanks or pump out required.

Wavebrite discharge meets EU Council Directive concerning waste water treatment (91/271/EEC).

This unique system is simple to install, operates automatically and gives an effective solution for grey water disposal or recycling.

No holding tanks, no need for pump out or to carry the extra weight of water onboard.

Four stage filter system is modular, can easily be increased in size so it is suitable for a wide range of craft.

Filtered water can be further processed and reused.

Wavebrite module and filter cartridges monitored at point of filtration or remotely. Easy module and cartridge maintenance.

Wavebrite™

Effective Grey Water Cleaning System.

Wavebrite has been developed using a unique filter design with multi media technology to provide a new innovative system.

Eliminate pollution from the discharge of grey (domestic) water produced from basins, showers and laundries. No more foul smelling holding tanks.

Grey water from source is pumped through the Wavebrite system and filtered directly overboard.

Harmful contaminants such as soap, shampoo, toothpaste, shaving cream, laundry detergents, hair, lint, body oils, dirt, grease, and fats are removed by the system.

Wavebrite also removes the chemicals within detergents, soaps, shampoos and cosmetics. This mix of contaminated water is cleaned at low cost to EU Waste Water Standard.

Importantly the harmful phosphates present in waste waters are removed, reducing the toxic effect on the environment.

The filter cartridges and the Wavebrite filter module are easily monitored.

Wavebrite Grey Water Module - Range of Sizes

Pump Technology by Whale Water Systems

Wavebrite Detail & Specifications

Wavebrite, a Grey Water Cleaning System.

FEATURES & DETAIL:

Four stage grey water filtration.

Pump with automatic control.

12/24v DC and AC models available.

Point of filtration pressure gauges and remote hour meter supplied.

15 L/min maximum flow rate, basic model. Wavebrite filter module working life 20 hours.

The components are modular and can be located separately around the boat connected by flexible hose for ease of installation.

The Wavebrite housing contains a uniquely designed filter module made of several filter medias and flow technologies.

The Wavebrite System has 5 main components:

1. Wavebrite module.
2. Wavebrite pre-filters.
3. Pump.
4. Pump strainer.
5. Grey Water sump and float switch.

All connections, pressure gauges, hour meter, 5 metres of 15mm and 1 metre of 22mm hose are supplied.

The pump, GW sump, connections and pressure hose are manufactured by Whale Water Systems.
